The new Wilo-Stratos PICO high-efficiency pump.

Wilo-Stratos PICO high-efficiency pump.

Leading the A-class. TÜV-approved high efficiency. Up to 90 % savings.*

Wilo-Stratos PICO provides the following advantages:

* When it comes to electricity consumption, the new Wilo-Stratos PICO is more efficient than any other A-class pump, according to standard Europump Commitment measuring procedures. With up to 90 % energy cost savings compared to old, uncontrolled heating pumps, it's in a class of its own! TÜV SÜD (German Technical Inspection Association South) calculated an average annual electricity consumption of only 46.5 kWh for a typical single-family house according to the standard measuring procedure. The certificate can be seen at www.wilo.com/legal.

Wilo-Stratos PICO

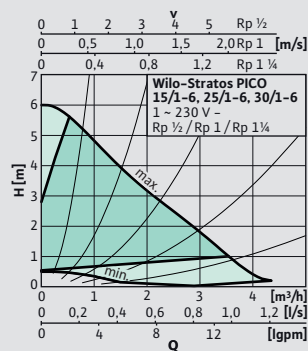

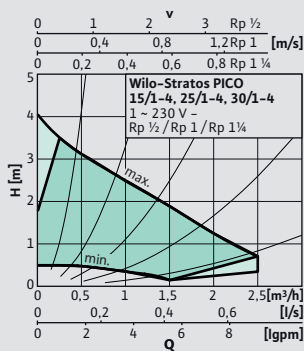

Field of application

Warm water radiators in all systems in single and two-family houses, air-conditioning applications, industrial circulation systems

User benefits

- High-efficiency pump for energy saving, rated energy efficiency class A
- Reliable starting and maximum convenience due to high starting torque and deblocking software
- Simple to set up, quick to install
- Display with consumption reading
- Thermal insulation shell for heating applications as standard

Fits in any set-up.

Installing a pump has never been as easy as with the Wilo-Stratos PICO. This is due to its compact design, which allows the little high-efficiency pump to fit into any set-up.

Easy connection.

If previously you've always had to connect the ends of the power cables directly to the terminal box, with the Wilo-Connector you'll have everything more effectively under control.

Simple setting.

With the large display, the Wilo-Stratos PICO can be set from the front and with incredible ease, thanks to the simple menu navigation and proven red-button technology.

Automatic bleeding.

At just one press of a button, the Wilo-Stratos PICO activates its automatic bleeding – for maximum performance and minimum noise.
